MICROPROCESSORS AND MICROSYSTEMS

10 YEAR INDEX — PAPERS AND AUTHORS

Volume 1, 1976–77
Volume 2, 1978
Volume 3, 1979
Volume 4, 1980
Volume 5, 1981
Volume 6, 1982
Volume 7, 1983
Volume 8, 1984
Volume 9, 1985
Volume 10, 1986

Volume numbers are shown in parentheses, followed by page numbers

INDEX TO PAPERS

Hardware

Microprocessors; memory; peripherals; backplane buses; system design; multiprocessors and parallelism; networking and distributed systems; test; semiconductor technology; VLSI

(A) = applications;
(DN) = design note;
(MS) = microprocessor survey;
(PP) = product profile;
(RN) = research note;
(RR) = research report;
(T) = teach-in;
(U) = update

Microprocessors

An 8-bit single-chip microcomputer for automotive engine control (6) 347
Comparative software analysis of the MC6809 microprocessor (5) 401
Components for information processing (1) 319
Concurrent internal and input/output activities (T) (2) 276
Current state of microprocessors (1) 5
Definition of unspecified flag bits of the Z80 microprocessor (9) 15
Design and implementation of low-cost emulators for microprocessors (9) 400
Design of microprogrammed floating point processor using superslice Am2903 (7) 155
Developments in 16-bit microprocessors (T) (4) 11
Examination of microcomputer interrupt systems (9) 107
Exception handling in the 68000, Part 1 (T) (10) 202
Exception handling in the 68000, Part 2 (T) (10) 258
Expert systems with 68000 and LISP (8) 374
General-purpose crossassembler for 8-bit microprocessors (T) (9) 234
Graphical approach to microprocessor comparison (1) 373
Highly serial architecture for a microprocessor (6) 117
Influence of architecture on numerical algorithms (2) 130
Intel 3000 and AM 2900 microprocessors — a comparison (1) 287
Intel 8085 microprocessor — a review (DN) (1) 495
Logical operations on flag bits X5 and CY, definition of D3 and an undocumented feature of instruction DADrp in the 8085 (RN) (10) 169
Low-power single-chip microcomputers (T) (8) 34
MC 6809 microprocessor (2) 162
Microcomputing into the 80s (4) 223
Microprocessor code compactness (3) 9
Microprocessor developments 1976 (MS) (1) 185
Microprocessor device reliability (1) 299
Microprocessor impact on commerce (3) 59
Microprocessor interrupt handling (DN) (1) 317
Microprocessor I/O emulation facilities (9) 386
Microprocessor survey (2) 13
Microprocessors, side effects and society (1) 305
Powerful trace facility for the MC68000 microprocessor system (9) 3
Processor components: data path and control circuits (1) 380
Programming the 68000 in high-level language for VME (8) 338
Putting a minicomputer onto a chip — PDP-11 to J11 (8) 242
Review of microprocessor architecture (T) (3) 21
Serial I/O of alphanumeric data under interrupt control (2) 204
Single-chip microcomputer for use in automotive instrumentation (6) 367
Software-calling conventions for the Z8000 (5) 199
Standard microprocessor programming cards (9) 274
The 68000 and its interface (8) 324
The MC68020, a true 32-bit microprocessor (8) 377
TMS320 — a step forward in digital signal processing (7) 451
Towards a universal microprocessor (1) 159
Transputer communication link (10) 211
Trends in 16-bit architecture (3) 129
Undocumented features of the X5 flag bit in the 8085 microprocessor (9) 296
Xenix and the Motorola 68000 family (8) 350
Zilog Z8000: an architectural overview (2) 242
8086 — its development and capability (2) 166
68000 and the Pick operating system (8) 357
68000 PDOS — an overview (U) (8) 458

Memory

A simple memory system for microprocessors (DN) (1) 129
CMOS ROMs for microprocessor evaluation (4) 303
Communication between two microprocessors through common memory (6) 303
Design and evaluation of a dual-microcomputer shared memory system with a shared I/O bus (10) 3
Design considerations for hardware-refreshed memory card for the MC68000 (8) 413
Design of a 64k dynamic RAM (DN) (5) 405
Designing flexibility into memory systems (3) 435
Development equipment with switched memory decoding (10) 392
Dual port memory microprocessor system for data logging (7) 263
Error detection and correction for memories (2) ...

Expert systems with 68000 and LISP (8) 374
General-purpose crossassembler for 8-bit microprocessors (T) (9) 234
Graphical approach to microprocessor comparison (1) 373
Highly serial architecture for a microprocessor (6) 117
Influence of architecture on numerical algorithms (2) 130
Intel 3000 and AM 2900 microprocessors — a comparison (1) 287
Intel 8085 microprocessor — a review (DN) (1) 495
Logical operations on flag bits X5 and CY, definition of D3 and an undocumented feature of instruction DADrp in the 8085 (RN) (10) 169
Low-power single-chip microcomputers (T) (8) 34
MC 6809 microprocessor (2) 162
Microcomputing into the 80s (4) 223
Microprocessor code compactness (3) 9
Microprocessor developments 1976 (MS) (1) 185
Microprocessor device reliability (1) 299
Microprocessor impact on commerce (3) 59
Microprocessor interrupt handling (DN) (1) 317
Microprocessor I/O emulation facilities (9) 386
Microprocessor survey (2) 13
Microprocessors, side effects and society (1) 305
Powerful trace facility for the MC68000 microprocessor system (9) 3
Processor components: data path and control circuits (1) 380
Programming the 68000 in high-level language for VME (8) 338
Putting a minicomputer onto a chip — PDP-11 to J11 (8) 242
Review of microprocessor architecture (T) (3) 21
Serial I/O of alphanumeric data under interrupt control (2) 204
Single-chip microcomputer for use in automotive instrumentation (6) 367
Software-calling conventions for the Z8000 (5) 199
Standard microprocessor programming cards (9) 274
The 68000 and its interface (8) 324
The MC68020, a true 32-bit microprocessor (8) 377
TMS320 — a step forward in digital signal processing (7) 451
Towards a universal microprocessor (1) 159
Transputer communication link (10) 211
Trends in 16-bit architecture (3) 129
Undocumented features of the X5 flag bit in the 8085 microprocessor (9) 296
Xenix and the Motorola 68000 family (8) 350
Zilog Z8000: an architectural overview (2) 242
8086 — its development and capability (2) 166
68000 and the Pick operating system (8) 357
68000 PDOS — an overview (U) (8) 458

Memory

A simple memory system for microprocessors (DN) (1) 129
CMOS ROMs for microprocessor evaluation (4) 303
Communication between two microprocessors through common memory (6) 303
Design and evaluation of a dual-microcomputer shared memory system with a shared I/O bus (10) 3
Design considerations for hardware-refreshed memory card for the MC68000 (8) 413
Design of a 64k dynamic RAM (DN) (5) 405
Designing flexibility into memory systems (3) 435
Development equipment with switched memory decoding (10) 392
Dual port memory microprocessor system for data logging (7) 263
Error detection and correction for memories (2) ...

Hardware switch for DMA transfer to augment CPU efficiency (7) 117
Improving mass storage performance (8) 430
Memories and microcomputers (1) 252
Memories in microprocessor systems (T) (3) 227
Memories in microprocessor systems (T) (3) 284
Memories in microprocessor systems (T) (3) 327
Memory considerations for a microprocessor video interface (DN) (5) 73
Memory organization for two parallel readouts (1) 369
Memory system design (DN) (2) 94
Memory-based logic sequence generation (9) 446
Multiplexed DMA with the MC6800 (DN) (3) 185
Recoverable file system for microprocessor systems (9) 179
Semiconductor memories: a review (1) 85
Software-controlled memory duplication (9) 21
Switched memory for multiprocessor MC6809E systems (9) 475
Total memory test (DN) (4) 141
Using EPROMs for file storage (DN) (2) 350
Using microprocessors without ROM (1) 237
Vision system based on a single-chip microcomputer (10) 485

Peripherals

A user-friendly interface adaptor (9) 432
Aids for the visually handicapped (8) 516
Alphanumeric TV display interface (1) 217
A/D and D/A conversion (T) (2) 341
CRT terminal for a programmable controller (DN) (8) 80
Data-recording formats (2) 123
Digital cassette-recorder interface (2) 212
Floppy disc file management (DN) (3) 113
Generating paper tapes for PROM programmers (4) 312
Highly dynamic text display system (3) 73
Intelligent data acquisition system (DN) (5) 362
Intelligent digital plotter (2) 335
Microcomputer kit review (2) 78
Microcomputer kit review (2) 151
Microprocessor keyboard encoding (2) 67
Microprocessor-based disc system (1) 33
Microprogrammable peripheral controller (6) 107
Miniature printer for automotive applications (DN) (6) 378
Non-clocked encoded keyboard design (DN) (3) 144
Reducing CRT display overheads in Z80 systems using refresh-mode transfer (DN) (8) 140
Reliability and accuracy requires detailed hardware design (5) 193
Reliable audiocassette data interface (2) 119
Serial interface/tape recorder modem (3) 461
Standards in microcomputer design (2) 329
Teleprocessing monitor/logger (2) 225
Universal RS232C cable (DN) (9) 231
Using the Intel 8741 universal peripheral interface (DN) (2) 236

Backplane buses

A demonstration system for linking microprocessors using the GPIB (IEEE 488) (DN) (7) 173
Advances in STD system capability (10) 115
An independent user's view of backplane bus standards (10) 125
Backplane bus standards — why we need them, what we have got and who makes them (6) 450
Building up a system architecture using VMEbus (10) 86
Computer system buses (T) (3) 413
Design of a Multibus-compatible colour graphics subsystem (8) 284
Eurobus — the UK-designed general-purpose backplane bus (6) 483
Evolution and use of the VME subsystem bus — VSB (10) 307
Experiences in designing the M3 backplane bus standard (10) 101
Futurebus — the independent standard for 32-bit systems (10) 65
IEEE-488 interface using parallel I/O ports (6) 281
IEEE P896 — the Futurebus project (6) 489
Introduction to the Fastbus (10) 77
Major standardization issues of the proposed IEEE 796 Bus — Multibus (6) 471
Multibus II message passing (10) 91
Multibus Link preserves hardware and software investment (U) (8) 297
Objective comparison of 32-bit buses (U) (10) 94
P696/S100 — a bus which supports a wide range of 8- and 16-bit processors (6) 466
S100 in commerical applications (10) 120
Standard bus for 8-bit microprocessor systems (6) 455
Standards for microsystems (4) 299
Standards in microcomputer design (2) 329
'STE' Eurocard bus, P1000 (U) (7) 269
The physics of driving backplane buses (10) 61
Using Futurebus in a fifth-generation computer (10) 69
VERSAbus — a multiprocessor bus standard — and VMEbus — its Eurocard counterpart (6) 475
Why the Q-bus lives on (10) 108

System design

Advanced DMA controller for 16-bit microcomputer systems (8) 237
An inexpensive microprocessor development system (1) 25
An intelligent remote-control station (2) 21
Build or buy? (1) 22
Building up a system architecture using VMEbus (10) 86
Circuit idea for expanding the 8086-based single-board computer (DN) (6) 77
Comparison of design-implementation methods (1) 473
Design and construction of an array processor (4) 83
Design approach to low-cost process control (DN) (9) 191
Design concept for a microprocessor-based temperature controller (6) 225
Design of a microcomputer-based meetings system (DN) (6) 135
Design of a microprocessor-based process controller using multilevel hierarchical systems theory (8) 58
Design of a microprogrammable computer with bit-slice devices (T) (4) 57
Design of a microprogrammable computer with bit-slice devices (T) (4) 95
Design of a modular systems applications microcomputer (1) 345
Design of externally triggered data acquisition units (8) 417
Design of modular workhandling systems (8) 16
Design techniques with microprocessors (2) 263
Designing flexibility into memory systems (3) 435
Designing with single chip microcomputers (3) 135
Digital cassette-recorder interface (2) 212
Expansion and initialization of serial I/O channels (DN) (6) 189
Expansion by contraction (1) 9
Fatigue damage monitoring (4) 263
Graphics-oriented data-collection unit (2) 139
Hardware system for realtime signal processing software development (10) 251
IEEE-488 interface using parallel I/O ports (6) 281
Intelligent digital plotter (2) 335
Interfacing a hardware multiplier to a general-purpose microprocessor (1) 425
Knowledge and experience-based systems for analysis and design of microprocessor applications hardware (6) 515
Microcomputer for the dynamics laboratory (10) 216
Microcomputer position control system (3) 163
Microcomputer project management (5) 19
Microprocessor based data acquisition system (3) 359
Microprocessor interfaces to NCR bytewide E^2PROMs (8) 290
Microprocessor program development support (1) 259
Microprocessor system design (2) 3
Microprocessor system partitioning (2) 147
Microprocessor, memory and input/output structures (T) (2) 231
Microprocessor-based data acquisition system for respirator signals (5) 339
Microprocessor-based delay generators (DN) (10) 25
Microprocessor-based IEEE-488 interfacing unit as a development aid (6) 275
Microprocessor-based PCM decommutator (8) 470
Microprogrammed logic network design (2) 73
Microsystem design with the 8052AH-basic microcontroller (9) 405
Minimizing chip count in a microsystem (DN) (6) 239
Mobile digital datalink for field work applications (7) 435
Modular hardware of reduced performance for dedicated microprocessor applications: examples and justification (8) 221
MSF-driven real-time clock (2) 323
New design for an 82720-based colour graphics generator (DN) (10) 386
Parallel I/O options for 8085-based systems (T) (8) 86
Realtime data acquisition unit for an MC68000 system (9) 171
Realtime tracking and performance analysers for use in drug evaluation (9) 118

Retrofitting machine tools with computer control (9) 378
Serial interface for the Zilog Z80 (DN) (5) 73
Setting time into a microcomputer (DN) (2) 283
Simple multiplexed interface for the MC6809 and the 146818 RTC (DN) (8) 189
Software/hardware integration on microprocessors (9) 8
Standalone low-cost interface, controller and emulator for the Apple II (8) 67
Standards for microsystems (4) 299
System design of data acquisition units (5) 109
Systems integration with reliability in mind (T) (7) 33
Teleprocessing monitor/logger (2) 225
Text processing system (3) 102
The true costs of microprocessing (2) 115
Universal step-motor controller-indexer (4) 253
6800 coprocessor for a 6502 bus (DN) (10) 278
32008-based single-board microcomputer (DN) (10) 28

Multiprocessors and parallelism

A parallel processing simulator for a network system using multimicroprocessors (6) 15
A procedure for multimicroprocessor system testing during development (5) 313
Colour television graphics simulation (3) 311
Communication between two microprocessors through common memory (6) 303
Computer trees: a concept for parallel processing (3) 244
Design and evaluation of a dual-microcomputer shared memory system with a shared I/O bus (10) 3
Design and implementation of fault-tolerant multimicrocomputer systems (5) 153
Design of a multimicroprocessor-controlled PABX (9) 300
DISCUS — a distributed control microprocessor system (3) 267
Identification of a program segment from memory dump (4) 11
Improve complex software by using multiple microprocessors (1) 165
Large multimicroprocessor systems (3) 271
Message-passing primitives for multimicroprocessor systems (10) 156
Multibus II message passing (10) 91
Multiprocessing (DN) (1) 385
Multiprocessor solution in OCCAM to an NP-complete problem (9) 162
Overview of a development environment (3) 301
Parallel processing with an array of microcomputers (5) 241
PLEIADES: a multimicroprocessor interactive knowledge base (3) 77
Processor-processor communication (3) 317
Replacement of computer bureaux (3) 277
Software for CYBA-M (3) 306
Switched memory for multiprocessor MC6809E systems (9) 475
Total life calculations with and without maintenance (3) 257
Transputer communication link (10) 211
Use of the slave emulator (5) 65
Using dataflow in a system of multiple single board computers (5) 103
Using Futurebus in a fifth-generation computer (10) 69

Networking and distributed systems

A gateway development system (6) 21
A microprocessor-based local network access unit (6) 3
A multi-microcomputer communications switch (1) 99
A parallel processing simulator for a network system using multimicroprocessors (6) 15
ACRE: a real-time distributed system (2) 195
Brown University network — BRUNET (6) 413
Communications in microprocessor industrial implementation (3) 443
Comparison of local network technologies (6) 403
CP/NET: control program for a microcomputer network (5) 69
Cross-bar switch multiple microprocessor system (7) 75
Design of a hardware arbiter for multimicroprocessor systems (8) 21
Design of a multimicroprocessor-controlled PABX (9) 300
DISCUS — a distributed control microprocessor system (3) 267
Emerging local area network technologies (T) (10) 17
Ethernet designer's guide (6) 405
Evolution in dynamic structures (3) 249
Experimenting with local networks using an integrated circuit data link controller (6) 9
Flexible interface based on the peripheral interface structure (DN) (10) 222
Implementation of local area networks (U) (6) 430
Implementation of moving TDM slots for voice transmission on Ethernet (9) 427
Industrial computer networks and the role of MAP, Part 1 (10) 363
Interconnection services of Net/One (6) 419
IPA — a processing architecture based on the ISO network reference model (6) 171
Large multimicroprocessor systems (3) 271
Local area networks (U) (6) 25
Local area networks — a merger of computer and communications technologies (5) 187
Low-cost high-integrity loop communication systems (DN) (5) 357
Multicomputer-controlled terminal switching system (5) 459
Multimicroprocessor computer system (3) 179
Optimizing function distribution in a terminal network (1) 362
Parallel processing with an array of microcomputers (5) 241
Performance analysis of a distributed processing system — a case study (DN) (9) 184
Portable software for connecting remote microcomputers and a central minicomputer (7) 25
Process communication within a distributed multimicrocomputer system (5) 149
Processor-processor communication (3) 317
Serial communication (T) (5) 247
Simple token ring local area network (8) 171
Software development for communication between two microcomputers (7) 429
Software strategy for multiprocessors (3) 265
The Newcastle Connection (PP) (9) 354
The roving slave processor (1) 79
Use of local area networks within manufacturing systems (6) 425
Using microprocessors without ROM (1) 237

Test

A procedure for multimicroprocessor system testing during system development (5) 313
Database management in a microcomputer-controlled IC tester (8) 488
Design for testability and built-in self-test for VLSI circuits (10) 139
Design for testability — a review of advanced methods (10) 531
Designing for testability (3) 3
Digital troubleshooting (DN) (3) 141
Error detection and correction for memories (2) 29
Fault tolerance and digital systems (3) 365
Memory-based logic sequence generation (9) 446
Microprocessor device reliability (1) 299
Noncontact test signal acquisition (6) 69
PDP-11/60–MC6800 microprocessor development system (4) 175
Production testing of microprocessor-based equipment (5) 299
Simple IC tester using a database technique (10) 161
Testing and evaluation of digital control systems (5) 304
Testing microsystems (U) (5) 318
Testing using a minimal number of instructions (5) 295
The digital store oscilloscope (DSO) as a cost-effective solution to measurements in digital circuits (T) (8) 435
The role of the logic state analyzer in the design of microprocessor systems (1) 119
Total life calculations with and without maintenance (3) 257
Total memory test (DN) (4) 141

Semiconductor technology

Molecular conductors and semiconductors — the electronic materials of the future (U) (8) 249
New etching techniques for semiconductors (RR) (9) 250
Polymer chemists find new ways of making chips (U) (7) 272
Superlattices (U) (8) 38

VLSI

Design for testability and built-in self-test for VLSI circuits (10) 139
Design for testability — a review of advanced methods (10) 531
Image processing with VLSI (7) 482
VLSI design for massively parallel signal processors (7) 461

Software

Microprogramming; assembly language; high-level languages; operating systems; software development; simulation; multiprocessing software; algorithms

Microprogramming

Design of microprogrammed floating point processor using superslice Am2903 (7) 155
Highly serial architecture for a microprocessor (6) 117
LSI microprogrammable microprocessors (1) 407
Microprogrammable peripheral controller (6) 107
Microprogrammed logic network design (2) 73
Processor components: data path and control circuits (1) 380
Redefinable crossassembler for horizontally microprogrammable processors (8) 177
Software for hardware engineers (1) 169
Writable control store (DN) (2) 280

Assembly language

A 6502 macro assembler in FORTH (7) 213
BASIC crossassembler for the 8086 (3) 175
Crossassembler for the TMS32010 digital signal processor (10) 434
General-purpose crossassembler for 8-bit microprocessors (T) (9) 234
Linking assembly code to PASCAL programs for microprocessors (8) 29
Microprocessor support software: Part 1, assemblers and simulators (T) (1) 491
Operating systems, compilers, assemblers and application programs: audit trails of user satisfaction (U) (9) 241
PASSEM — a universal approach to assembly language (5) 395
Redefinable crossassembler for horizontally microprogrammable processors (8) 177
Software for hardware engineers (1) 169
Standard microprocessor programming cards (9) 274
Using macroassemblers to create microprocessor crossassemblers (1) 477
2-pass crossassembler for the 8080 microprocessor (1) 293

High-level languages

A 6502 macro assembler in FORTH (7) 213
C — a perspective (9) 340
C — an alternative to assembly programming (T) (9) 124
COBOL for business applications (3) 99
Design of Edinburgh LOGO (8) 119
Development of high level languages (1) 241
Experience using Zilog's high-level language PLZ (2) 259
Expert systems with 68000 and LISP (8) 374
FORTH and microprocessor applications at the Royal Greenwich Observatory (7) 203
High level languages on any machine through VAL (3) 395
High-level languages: the next technology (2) 286
Interactive development environment for single-board computers (10) 268
Linking assembly code to PASCAL programs for microprocessors (8) 29
LOGO and the British LOGO User Group (8) 124
LOGO on microsystems (U) (8) 115
Microcomputer control for industrial plants (5) 23
Microprocessor-based multichannel analyser developed using POLYFORTH (7) 217
Mosys: the MODULA-2 system (8) 361
Multiprocessor solution in OCCAM to an NP-complete problem (9) 162
OCCAM solves classical operating system problems (8) 280
OCCAM — an overview (8) 73
Operating systems, compilers assemblers and application programs: audit trails of user satisfaction (9) 241
Programming microprocessors with a high level language — the case of PASCAL/64000 (7) 169
Programming the 68000 in high-level language for VME (8) 338
P-notation: high level description language for software design (T) (4) 267
P-notation: high level description language for software design (T) (4) 307
P-notation: high level description language for software design (T) (4) 363
P-notation: high level description language for software design (T) (4) 411
Software development for the 8052AH-basic microcontroller (9) 481
Software for hardware engineers (1) 169
Software support. Part 2, high-level languages (2) 42
Standards for microsystems (4) 299
Standards in microcomputer design (2) 329
State language for realtime process control (DN) (5) 27
Subjective impressions of a non-naive Unix and C beginner (9) 333
The POPLOG program development system (8) 368
The programming language PASCAL (3) 321
The programming language PASCAL (3) 375
The programming language PASCAL (3) 405
Transaction language characteristics and user/computer interfaces in manufacturing systems (7) 3
Transferring a macro program to a micro machine (7) 107
Working with OCCAM: a program for generating display images (8) 3
Writing a FORTH discompiler and using FORTH in digital filters and multichannel analysis (7) 223

Operating systems

Advanced 16-bit operating system handles multiple tasks in real time (7) 375
Benchmarking Unix systems — some experiences (9) 343
Concurrent CP/M-86 and recent advances in operating systems (7) 391
CP/M operating system — the software bus (5) 115
iRMX 86 — a realtime operating system for advanced 16-bit microcomputers (7) 387
Making Unix online documentation more effective (9) 346
Mosys: the MODULA-2 system (8) 361
OCCAM solves classical operating system problems (8) 280
Operating systems, compilers, assemblers and application programs: audit trails of user satisfaction (U) (9) 241
Porting a new microcomputer operating system (7) 380
Porting Unix to new hardware (DN) (9) 350
Real-time executives for microprocessors (4) 211
Software development tool for target systems and EPROM programmer within a Unix environment (10) 540
Subjective impressions of a non-naive Unix and C beginner (9) 333
System V interface definition — a last chance for Unix? (9) 337
The Newcastle Connection (PP) (9) 354
The portable UCSD p-System (7) 394
TSX-Plus: a multiuser operating system for the LSI-11 and PDP-11 (PP) (9) 253
Xenix and the Motorola 68000 family (8) 350
16-bit operating systems (7) 364
16-bit operating systems standards and MS-DOS (7) 369
68000 and the Pick operating system (8) 357
68000 PDOS — an overview (U) (8) 458

Software development

A gateway development system (6) 21
An inexpensive microprocessor development system (1) 25
An introduction to structured programming (T) (2) 88
Automatic software production for microcomputers (1) 29
Automatic timing of user–system interaction as an evaluation aid for microsystems (9) 17
Costing microprocessor software (DN) (3) 29
Crosscompiler for hardware emulation (4) 353
Debugging aids for microprocessor systems (RR) (2) 83
Development aids for high speed microprocessor systems (1) 17
Development equipment with switched memory decoding (DN) (10) 392
Embedded microprocessor software: case study of an automatic computer exchange (10) 491
Example of design using structured programming (T) (2) 155
Graphbug — a microprocessor software debugging tool (10) 195
Hardware system for realtime signal processing software development (10) 251
Host development systems — the software path to tomorrow (1) 246
Interactive development environment for single-board computers (10) 268
Interrupts and the hardware–software rendezvous —

microcomputer software engineering (9) 57
Low cost trace facility for development systems (3) 400
Microprocessor program development support (1) 259
Microprocessor real-time task scheduler (DN) (4) 101
Microprocessor software development method using a specification (1) 353
Microprocessors and software design tools (3) 87
Microprocessor-based IEEE-488 interfacing unit as a development aid (6) 275
MicroSim — a new approach to program development (3) 95
Minicomputer-based development facility for contract research (4) 181
Overview of a development environment (3) 301
PDP-11/60–MC6800 microprocessor development system (4) 175
PL/M codes mixing on single-board systems (DN) (8) 498
Powerful trace facility for the MC68000 microprocessor system (9) 3
Real-time simulated testing with a development system (4) 165
Simulation experiences in the development of software for digital signal processors (10) 419
Software development and system testing techniques (3) 15
Software development for communication between two microcomputers (7) 429
Software development for a small telephone exchange (5) 59
Software development for the 8052AH-basic microcontroller (9) 481
Software development tool for target systems and EPROM (10) 540
Software for CYBA-M (3) 306
Software strategy for multiprocessors (3) 263
Software validation (4) 395
Software/hardware integration on microprocessors (9) 8
Specifying the system (4) 259
The POPLOG program development system (8) 368
TMS320 digital system processor development system (9) 50
6800/6802 microprocessor emulation adaptor (DN) (9) 24
6802/6808 emulation for the HP64000 microprocessor development system (DN) (6) 79
8088 development system programmed in C (DN) (9) 452

Simulation

A parallel processing simulator for a network system using multimicroprocessors (6) 15
Colour television graphics simulation (3) 311
Machine cycle simulator for a microprocessor (6) 131
Microprocessor support software: Part 1, assemblers and simulators (T) (1) 491
Microprocessor-based simulator of a variable time delay (6) 73
New generation of microsystem simulators (4) 5
Real-time simulated testing with a development system (4) 165
Simulation experiences in the development of software for digital signal processors (10) 419
Simulation package for small-scale systems (T) (9) 76
Teaching bit-slice microprocessor applications using simulation techniques (5) 387

Multiprocessing software

Distributed programs: an overview of implementations (10) 475
Improve complex software by using multiple microprocessors (1) 165
Software controller for an arithmetic processor (10) 442

Algorithms

A useful trace facility for microprocessors (5) 99
Coordinate transformations and programming for small revolute-coordinate robots (9) 290
Fast Haar transform algorithm: a 6809-based realtime evaluation (8) 126
High-speed divider using multiplication (5) 235
Influence of architecture on numerical algorithms (2) 130
Methodology for the evaluation and selection of microprocessors for specific applications (7) 439
Microprocessor code compactness (3) 9
Microprocessor detection of dual-tone signals (3) 353
Microprocessor paper-tape editor (1) 421
Microprocessor-based digital controller for DC motor speed control (10) 543
Multichannel software event counter for the MC6809 (7) 444
Process structure for interactive software (6) 297
Realtime implementation of the Viterbi decoding algorithm on a high-performance microprocessor (10) 11
Scaling a frequency display (DN) (1) 263
Scheduler for realtime process control (9) 114
Sine and cosine calculations (DN) (2) 284
Software organization of a microcomputer-based data-acquisition system (2) 59
Software technique for a microcomputer-based digital instrumentation scheme using functional expansion (9) 218
Software-based single-step and multiregister breakpoint facility (7) 81
Some simple microprocessor enhancements (1) 415
Speech recognition system using Walsh analysis and dynamic programming (10) 427
Unified elementary function generator (2) 270
Using a microprocessor in high performance liquid chromatography (7) 19
Working with OCCAM: a program for creating display images (8) 3

Applications

Control; instrumentation; signal processing; telecommunications; image processing and vision; graphics; education and training; speech synthesis and recognition; miscellaneous

Control

A flexible controller for robots (7) 121
A microprocessor-controlled instrument for intravenous delivery of analgesia (IDA) (7) 251
Adaptive cushioning of pneumatic cylinders using microprocessor-based controls (7) 67
An 8-bit single-chip microcomputer for automotive engine control (6) 347
Coordinate transformations and programming for small revolute-coordinate robots (9) 290
Design concept for a microprocessor-based temperature controller (6) 225
Design of a microcomputer-based LOGO turtle interface (7) 63
Design of a microprocessor-based process controller using multilevel hierarchical systems theory (8) 58
Design of a pH titrator as a component part of a personal computer (8) 274
Developing a microprocessor-based energy management controller (6) 235
Development of an operational hydroturbine governor (4) 347
Diagnostic equipment using microcomputers (5) 443
Embedded microprocessor software: case study of an automatic computer exchange (10) 491
Extended gaming machine facilities by microprocessor control (3) 453
Gas burner control using microprocessors (9) 64
Industrial data acquisition and control systems (3) 210
Microcomputer control for an industrial sewing machine (5) 351
Microcomputer control of a precision grinding machine (4) 341
Microcomputer engine control (5) 451
Microcomputer-controlled instrumentation for ink-jet printing (4) 43
Microcomputer-controlled lift system (4) 137
Microcomputer-controlled magnetic-amplifier power supply (DN) (9) 71
Microcomputer-controlled solar energy plants (6) 535
Microelectronics and manufacturing industry (4) 89
Microprocessor control of ignition advance angle (6) 355
Microprocessor control of multiaxes continuous path motion (6) 519
Microprocessor techniques for energy conservation in computer rooms (6) 219
Microprocessors in control systems (1) 38
Microprocessor-based controls for drilling — retrofitting aspects (6) 287
Microprocessor-based digital controller for DC motor speed control (10) 543
Microprocessor-based toll registration systems (4) 407

Microprocessor-controlled photodiode array for measurement of diffraction patterns (9) 226
Microprocessor-controlled driving unit for artificial hearts (7) 306
Microprocessor-controlled wind turbine generator (A) (9) 89
Microprocessor-digital converter applications (1) 222
Minimal M68000 system controllers for fast acting multi-input multi-output processes (10) 148
Multicomputer-controlled terminal switching system (5) 459
Personal computers in automation systems (5) 139
Pingpong-playing robot controlled by a microcomputer (A) (10) 332
Real-time process control in the 80s (4) 339
Reliable microprocessor control for drive-by-wire car steering for the disabled (6) 361
Retrofitting machine tools with computer control (9) 378
Robot workplaces (T) (8) 245
Scheduler for realtime process control (9) 114
Selftuning control of some pilot plant processes (5) 3
Software development for a solar energy system (4) 129
Software for a simple two-axis numerical control system (6) 293
Structural feature extraction in online extrusion of plastics (5) 13
The computerized family car will be commonplace in Europe before end of the decade (U) (6) 381
The microprocessor as a railway control system component (1) 41
The use of microelectronics in energy conservation and control (U) (6) 245
Transaction language characteristics and user/computer interfaces in manufacturing systems (7) 3
Triplicated microprocessor controlled automatic shutdown system (3) 347
Ultrasonic experimentation under microprocessor control (5) 347
Use of local area networks within manufacturing systems (6) 425
Using FORTH to control a robot arm (DN) (7) 228
12-bit audio time delay using the 6809 (DN) (10) 500

Instrumentation

Application of a microprocessor to monitor a destructive test machine (8) 25
Applying microcomputers to vehicle instrumentation (6) 371
CMOS automobile performance logger (7) 163
Control of protocol for mobile radios (3) 203
Data acquisition and control system for laboratory experiments (10) 325
Data flow control in an online system (3) 123
Design of a 6802-controlled propagation field strength analyser for land mobile radio services (6) 177
Design of a pH titrator as a component part of a personal computer (8) 274
Dietary intake recorder based upon a single-board microcomputer (9) 486
Example of the use of the BBC microcomputer for data collection (A) (10) 33
Industrial data acquisition and control systems (3) 210
Inline multichannel reflectance measurement using a 6801 series microcomputer (DN) (8) 193
Interfacing digitized Disa anemometer output to an Apple II computer (7) 314
Measuring the instability of AC arc discharges (5) 227
Microcomputer accident location system (4) 123
Microprocessor controlled colour vision tester (3) 219
Microprocessor-based data acquisition system for respirator signals (5) 339
Microprocessor-based device for measurements on a superconducting transmission line (7) 324
Microprocessor-based event sequence recorder (8) 492
Microprocessor-based heart monitoring (7) 29
Microprocessor-based portable system for heart condition diagnosis (9) 440
Microprocessor-controlled Auger spectrometer (1) 231
Microprocessor–digital converter applications (1) 222
Minicomputer-based development facility for contract research (4) 181
Mobile radio telemetry system for public transport (1) 54
Performance monitoring of the EC-1030 system by a microprocessor based monitor (6) 183
Power-system monitoring (1) 463
Realtime tracking and performance analysers for use in drug evaluation (9) 118
Remote monitoring system helps keep traffic under control (DN) (9) 133
Scaling a frequency display (DN) (1) 263
Single-chip microcomputer for use in automotive instrumentation (6) 367
Software development for a solar energy system (4) 129
Software technologies for a microcomputer-based digital instrumentation scheme using functional expansion (9) 218
The BBC microcomputer as a data acquisition tool (8) 136
The computerized family car will be commonplace in Europe before end of the decade (U) (6) 381
The roving slave processor (1) 79
Use of microcomputers in monitoring instruments, data acquisition, analysis and control (7) 419
Using a microprocessor in high performance liquid chromatography (7) 19

Signal processing

Adaptive delta modulation for speech synthesis (DN) (5) 409
FAD — flexibility in digital signal processing (7) 475
Microcomputer processing of 10 MHz acoustic signals (10) 273
Realtime high resolution data acquisition unit for an MC68000 system (9) 171
Simulation experiences in the development of software for digital signal processors (10) 419
Spectral observation of power network signals for digital signal processing (8) 475
TMS320 — a step forward in digital signal processing (7) 451
TMS320 digital signal processor development (9) 50
VLSI design for massively parallel signal processors (7) 461

Telecommunications

Design of a microprocessor-controlled PABX (6) 59
Design of a multimicroprocessor-controlled PABX (9) 300
Implementation of moving TDM slots for voice transmission on Ethernet (9) 427
Microprocessor detection of dual-tone signals (3) 353
Remote monitoring system helps keep traffic under control (DN) (9) 133
Software development for a small telephone exchange (5) 59

Image processing and vision

Automatic image analyser (A) (2) 90
Computer vision system for applications in robotics education (7) 320
Film analysis using a microcomputer digitizing system (7) 256
Image processing with VLSI (7) 482
Pingpong-playing robot controlled by a microcomputer (10) 332
Using a microprocessor to analyse particle shape — a tutorial system (7) 300
Vision system based on a single-chip microcomputer (10) 485

Graphics

Design of a Multibus-compatible colour graphics subsystem (8) 284
Graphbug — a microprocessor software debugging tool (10) 195
Graphics-oriented data-collection unit (2) 139
Microcomputer-based graphic display systems (1) 49
New design for an 82720-based colour graphics generator (DN) (10) 386
Standards in computer graphics (U) (9) 494
Transferring a macro program to a micro machine (7) 107

Education and training

Alternative approach to a microprocessor teaching laboratory (4) 219
Assembler-monitor package to teach assembly language (PP) (10) 336
Computer vision system for use in robotics education (7) 320
Computer-controlled model railway for use in teaching real-time programming (6) 529

Design techniques with microprocessors (2) 263
Highly serial architecture for a microprocessor (6) 117
Interfaces and programs for classroom experiments in biology (8) 424
Learning with microcomputers (1) 111
Microprocessor teaching (5) 465
Microprocessor teaching laboratory (3) 169
Microprocessor training equipment (4) 169
MIL project: a microcomputer integrated laboratory (4) 49
Preparing to live with micros (4) 53
Teaching bit-slice microprocessor applications using simulation techniques (5) 387
Teaching computer-aided engineering on the BBC microcomputer (10) 313
Teaching microcomputer-based design using a lift simulator (8) 230
Teaching microprocessor techniques to nonelectronics engineers (4) 187

Speech synthesis and recognition

A talking Prestel terminal (8) 403
Adaptive delta modulation for speech synthesis (DN) (5) 409
Advanced C^2MOS speech synthesizers (7) 469
Converting text into speech in real time with microcomputers (8) 481
Driving Votrax SCOI with microcomputers (9) 394
Human-factors aspects of designing computer voice output systems as communication aids for the disabled (8) 183
Speech recognition using Walsh analysis and dynamic programming (10) 427
Talking teletext receiver for the blind (10) 553
'Transparent' interfacing of speech recognizers to microcomputers (10) 371

Miscellaneous

Aids for the visually handicapped (8) 516
Engineering data processing programs for multiple microprocessors (3) 83
Euromicro 80: micromouse competition (4) 370
FORTH and microprocessor applications at the Royal Greenwich Observatory (7) 203
Handprinted text reader that learns by experience (10) 377
Interfacing a Perkins Brailler to a BBC Micro (8) 524
Microcomputer compilation and solution of crosswords (A) (9) 500
Microprocessor-based multichannel analyser developed using POLYFORTH (7) 217
Modular application systems for hotels (3) 107
Personal computers in offices of the future (3) 69
Realtime braille interface for Videotex interaction (8) 528
The automated office (3) 65
Visual handicap and the challenge of information technology in employment (8) 520
Word processing for blind people (8) 535
